Photoshop is one of the most used image editing software. It is relatively easy to master and is extremely powerful. Learn how to master Photoshop and post photo editing in your own business. Let's get started 1. Your Photoshop Tutorial Bookcase Beginners need to start from the basics if they want to master Photoshop. This means that, it is important to learn about a few basic functions before building on them. If you want to master Photoshop, you will need to start by learning the fundamentals and building upon those. People often prefer to learn some of the basic Photoshop tools and go from there. However, it is better to learn some of the lesser known shortcuts first. Why? When you learn to use tools like Smart Sharpen or Magic Wand or the Liquify filters, you have a way of learning how to use those tools better. This makes mastering the workflow easier. When you add a great knowledge of the lesser known shortcuts in, you create a toolbox for yourself. When you are working with images, learning to do things like align layers and put text on a layer, can save so much time in the long run. It will also cut down on the time it takes to get your images to print or the time it takes to get pictures to post online. The reality is, there are only so many hours in a day. It is a fact of life. It is useful to know about these lesser known shortcuts that can keep you working efficiently. 2. Save your work frequently People often forget to save their changes to a file. It is important that you save frequently. When you finish an image, save it. Yes, you will have to go back into the file and make a change, but, at least, you will have a backup. More importantly, you can make changes and keep them for later reference. It also helps if you keep a backup of images that you edit in Photoshop. If you are planning on using a service that runs images through Photoshop, it is important that you keep the edit version of your image. Some services are paid for by the image, and you will have to make a paid account. If you keep the original and the edited version of the image, you will have a clear idea of how your images

Q: How to get `--` in Racket If I want to use -- in Racket, how should I get it? A: Use a sigma as @Dmytro Kotskevich has suggested, or the following in a plain racket file: (define (sigma x) (if (> x 0) (list '-- x) x)) (define (not-sigma x) (sigma (- x 1))) You can test it with: (list (not-sigma 0)) Q: Are keywords names? Possible Duplicate: Keywords, tokens and syntax in Common Lisp When you write a function, an "identifier" is a word between parentheses: (foo bar) A "function name" is a word between parentheses or a bareword: (foo bar) (foo) (defun foo bar (a b)) But when you see a function like: (defun foo (bar baz) Are keywords names? A: The 'keywords are names (and syntactic designators) with special behaviour. Other names that are not keywords, like function names, are treated just as any other names. For instance the defun forms described above are read "define a function" as in (define foo (bar baz)) The behavior of the 'keywords are that their meaning is always determined from the environment of the form in which they occur. (A very special set of language rules.) This is part of how the semantics of the language are determined: there is a set of rules for how to transform a form into a value. (Forms are most often not allowed to contain keywords.) + (s q r t (4 7 5) - (1 + s q r t (4 7 5)))) . 1 S i m p l i f y - 3 * (s q r t (3) + (2 * s
