Field of the Invention The present invention relates to a communication device, communication method, and a communication program, which can provide secure communication services by using a secret key, a communication system, and a communication method. 2. Description of the Related Art Recently, IC cards that perform electronic transactions by using terminals and mobile phones have been developed. When services using an IC card are provided, PINs (Personal Identification Numbers) are assigned to each user of IC cards. However, if IC cards with such PINs are lost or stolen, personal information cannot be prevented from being stolen. In order to solve this problem, a method has been considered for preventing personal information from being stolen by using secret keys for electronic transactions. According to this method, IC cards and terminals that use IC cards exchange electronic transaction secret keys with a key distribution server, and then execute a transaction using the exchanged secret keys. If IC cards are stolen or lost and IC card information, such as an ID number of the IC card or PINs, is leaked to an unauthorized person, authentication of the IC card user (hereafter referred to as "authentication") may be impossible. If authentication is impossible
